## 2 RESEARCH INTEREST

My research focuses on Numerical Methods for Solving Differential Equations as Models in Sciences and Engineering. In the past few years I have worked on several methods such as Homotopy analysis method (HAM), Homotopy perturbation method (HPM), adomian decomposition method (ADM) and variational iteration method (VIM). Recently I have been increasingly working with a new technic based on the orthogonal Bernstein collocation method and others special functions to find approximate analytical solution.
